

## FIRE TECHX: INSTANT FIRE SUPPRESSION, LONG TERM RETARDATION

FIRE TECH X (FTX) is a unique non - chemical based product that is a superior solution for all Class A fires. FTX is the first and only true answer for combined fire suppression and long term retardation. Independent analysis of FTX by the Texas Engineering and Extension Service (TEEX) was resoundingly positive and brought numerous accolades including:

“Fire TechX is a dual purpose fire solution that enhances firefighters’ purchasing power as one product serves both roles. In addition, Fire TechX is an all natural, organic solution for environmental concerns surrounding the use of wild land fire chemical use.”

Fire TechX is shipped in powder form and is sold by weight (pounds or kilograms). Whereas most products are sold in liquid or mixed concentrate solution, FTX sells you 100% product. All that needs to be added to FTX is water. This makes shipping- logistics and storage much more cost effective.

In its powder form, FTX has a five year shelf life with no maintenance so there is no need to worry about expired product every year. In most cases, FTX can be mixed with your current equipment. If needed, FTX supplies a full line of mixing solutions.

Standard mixing rates are 1 pound to 10 gallons of water for structures and vertical adhesion, and 1 pound to 20 gallons for most wild land ground and aerial applications. FTX has been successfully deployed by hose, backpack, engine, brush trucks, slip on units, helicopter (both snorkel and bucket), and airplane. Due to its natural ingredients, FTX does not induce corrosion. This can be attested by the approvals granted to FTX by the United States Forest Service. As opposed to other products, FTX requires only tap water to clean up, and not pressure washers or chemical formulas. The United States Forest Service has deemed FTX to be readily biodegradable - the highest form of biodegradability there is.
